Steenwijk, 9 June 2006

Introduction of Innovative HighLow Motorbike Trailer

**Van Vossen Trailers offers help for stranded motorbikes at the Dutch TT circuit in Assen!
The trailers provide a quick and safe removal of all motorbikes off the circuit to each of the required service points.**

Quick, Safe and Easy!

Van Vossen Trailers has designed a HighLow trailer especially for the technical department at the Dutch TT.

The Innovative System Works As Follows :

It is possible to lower the HighLow trailer to ground level allowing the motorbikes to be loaded quickly and safely without the danger of the bikes falling over. Once the bikes have been loaded onto the trailer, it is pumped back up and can be driven to the service points where the bikes are fixed. Another benefit is that the bikes can be loaded using only 1 or 2 people instead of the previous 4.

Reason enough for the Dutch TT to choose van Vossen HighLow trailers.

The HighLow will be used in the upcoming 76^{ste} Dutch TT being held on the 22nd to 24th June 2006 in Assen The Netherlands.
